

PICUFLA

Data Dictionary

1. User Profiles (profiles)

Stores each user's account information like their display name, email address, and app preferences. This record is created automatically when someone signs up.

Field Name	Data Type	Required?	Description
id	Text	Yes	A unique identifier for the user (automatically generated).
email	Text	Yes	The user's email address.
display_name	Text	Yes	The name shown on their profile.
photo_url	Text	No	Link to their profile picture.
auth_provider	Text	Yes	How they signed up: "google" or "email".
created_at	Date & Time	Yes	When the account was created.
last_login_at	Date & Time	Yes	When the user last logged in.

notifications_enabled	Yes/No	Yes	Whether the user wants to receive push notifications.
bio	Text	No	A short personal description (up to 150 characters).
setup_complete	Yes/No	Yes	Whether the user finished setting up their profile.
is_deleted	Yes/No	Yes	Whether the account is marked for deletion.
deleted_at	Date & Time	No	When the account was marked for deletion.

2. Plant Catalog (plants)

A shared master list of all known plants within the ecosystem. The application reads data from this catalog, but users do not edit it directly. It serves as the primary reference database for core care suggestions and plant characteristics.

Field Name	Data Type	Required?	Description
id	Text	Yes	A unique identifier for the plant species.
common_name	Text	Yes	The everyday common name people use for the plant.
scientific_name	Text	Yes	The formal botanical or scientific classification name.
description	Text	Yes	A clear summary detailing the plant's unique look and features.
origin	Text	No	The primary geographic region where the plant grows naturally.
care_watering	Text	Yes	Plain instructions regarding how and when to water the plant.
care_sunlight	Text	Yes	Detailed light exposure guidelines required for optimal growth.

care_soil	Text	Yes	The recommended potting mix or soil type for this plant.
uses	Text	No	Common benefits of the plant, such as home air purification.
image_url	Text	Yes	A web link pointing to a high-quality reference photo of the species.
created_at	Date & Time	Yes	The timestamp when the plant record was logged into the system.

3. User's Plant Collection (user_plants)

Links an individual user to a specific plant they have discovered or uploaded. Each record represents a distinct item that has been saved to a user's personal digital garden collection.

Field Name	Data Type	Required?	Description
id	Text	Yes	A unique identifier generated for this specific saved plant entry.
user_id	Text	Yes	The unique identification number of the plant owner.
plant_id	Text	Yes	The connecting catalog ID for the identified plant species.
discovered_at	Date & Time	Yes	The exact date and time the user logged the plant entry.
location_lat	Number (decimal)	No	The latitude coordinate where the plant photo was taken.
location_lng	Number (decimal)	No	The longitude coordinate where the plant photo was taken.

location_label	Text	No	A custom name chosen by the user for the location (e.g., "Kitchen Window").
confidence_score	Number (decimal)	Yes	The mathematical certainty score delivered by the AI identification engine.
captured_image_url	Text	Yes	The storage link for the actual photo uploaded by the user.
notes	Text	No	Personal logs, journals, or general notes recorded by the user.
notes_updated_at	Date & Time	No	The specific date and time the personal notes field was last altered.
is_favorite	Yes/No	Yes	Indicates whether the user favorited or pinned this specific plant.
tags	List of Text	No	Custom keyword tags used to search, filter, and sort collection items.
is_deleted	Yes/No	Yes	A simple toggle indicating if the plant was removed from user view.

4. Care Reminders (reminders)

Stores reminders users set for their plants, like "water every week" or "fertilize on June 1". This structure keeps track of plant care schedules to accurately trigger automated smartphone notifications.

Field Name	Data Type	Required?	Description
id	Text	Yes	A unique identifier for the specific care alert record.
user_id	Text	Yes	The identifier of the user who requested the reminder.
user_plant_id	Text	Yes	The linked record ID from the user's personal plant collection.
care_type	Text	Yes	The type of care routine requested, such as watering, misting, or pruning.
custom_label	Text	No	A customized heading or personal note attached to the task.
scheduled_at	Date & Time	Yes	The next planned date and time for the notification to deliver.
is_recurring	Yes/No	Yes	Flags whether the task resets automatically after completion.

recurring_interval	Text	No	How often the event cycles (e.g., "every 7 days", "monthly").
expo_push_token	Text	Yes	The specialized token used to route notifications safely via Expo.
is_active	Yes/No	Yes	Checks if the reminder is running normally or muted by the user.
created_at	Date & Time	Yes	The exact date and time when the reminder configuration was created.

5. Identification Logs (identification_logs)

A history record of every individual time a user attempted to identify a plant image. This serves diagnostic tracking purposes, diagnostic history screens, and engine refinement.

Field Name	Data Type	Required?	Description
id	Text	Yes	A unique tracking identifier for the singular scanning attempt.
user_id	Text	Yes	The specific user identifier executing the scanner tool.
image_storage_path	Text	Yes	Cloud storage bucket file address where the scanned image resides.
identified_plant_scientific_name	Text	No	The scientific classification name of the top match found.
confidence_score	Number (decimal)	No	The precision accuracy score delivered by the primary identifier model.

alternatives	JSON	No	Additional alternative matches identified alongside respective probabilities.
was_accepted	Yes/No	Yes	Indicates if the scanning user approved and adopted the primary guess.
created_at	Date & Time	Yes	The direct date and time timestamp when the user performed the scan.

6. Rate Limits (rate_limits)

Tracks how many times an individual user utilized the plant identifier service within the trailing hour. This operational table actively enforces the system's 5-scan-per-hour fair access limit.

Field Name	Data Type	Required?	Description
user_id	Text	Yes	The distinct user identifier being rate-limited.
call_count	Number (whole)	Yes	The total quantity of scanner requests registered in the active window.
window_start	Date & Time	Yes	The exact timestamp when the current tracking hour window started.

7. Deletion Audit Log (deletion_audit_log)

Safeguards a structural ledger note indicating when a user requested account or personal data deletion. It powers the automated 30-day purge cycle safety window before final deletion.

Field Name	Data Type	Required?	Description
id	Text	Yes	A unique identifier for the specific data removal log event.
user_id	Text	Yes	The user record ID seeking permanent data erasure.
deletion_type	Text	Yes	Explicitly details what is slated for deletion (e.g., "full_account").
requested_at	Date & Time	Yes	The operational date timestamp when the removal command was logged.
purge_after	Date & Time	Yes	The future calendar date marking the hard end of the 30-day restoration window.
